

# += Operator

## += Operator

You can also use the += operator to concatenate a string.

First, we would assign an id in our HTML code:

```
<p id="Concatenate"></p>
```

Next, we would need to create an event on the paragraph element so that the JavaScript code we are about to write can be called:

```
<p id = "Concatenate" onclick = "myFunction()">Click Here!</p>
```

Then we would write in our JavaScript code:

```
function myFunction() {  
    var sentence = "I am learning";  
    sentence += " a lot from this book!";  
    document.getElementById("Concatenate").innerHTML = sentence;  
}
```

### Note

*innerHTML* modifies the content of an HTML element.
